

RESEARCH RESULTS

In 2014, *Botanics: Targets and Therapy* published a review of Petadolex® brand butterbur extract by Jose M. Prieto from the Department of Pharmaceutical and Biological Chemistry at London's UCL School of Pharmacy. He analyzed 21 different butterbur-containing dietary supplements, including Petadolex®.

Here is a summary of what the quality analysis portion of his review revealed:

- The amount of butterbur extract varied widely among the 21 brands, with **6 products found to contain no trace of the active *Petasites* ingredient.**
- Pyrrolizidine alkaloids (PAs) – **liver toxins** – were detected in **7 of the supplements.**
- Of the surveyed products, **only original Petadolex®-based products consistently passed the quality screenings.**
